Create a knowledge base using prepositional logic and show that the given query entails the knowledge base or not.

Code:

```
import pandas as pd

truth_values = [(False, False, False),
                (False, False, True),
                (False, True, False),
                (False, True, True),
                (True, False, False),
                (True, False, True),
                (True, True, False),
                (True, True, True)]

table = pd.DataFrame(truth_values, columns=["A", "B", "C"])

table["A or C"] = table["A"] | table["C"]         # A ∨ C
table["B or not C"] = table["B"] | ~table["C"]     # B ∨ ¬C

table["KB"] = table["A or C"] & table["B or not C"]

table["Alpha (α)"] = table["A"] | table["B"]
```

```
def highlight_rows(row):
    if row["KB"] and row["Alpha (α)"]:
        return ['background-color: green'] * len(row)
    else:
        return [''] * len(row)

styled_table = table.style.apply(highlight_rows, axis=1)

styled_table
```

OUTPUT:

	A	B	C	A or C	B or not C	KB	Alpha (α)
0	False	False	False	False	True	False	False
1	False	False	True	True	False	False	False
2	False	True	False	False	True	False	True
3	False	True	True	True	True	True	True
4	True	False	False	True	True	True	True
5	True	False	True	True	False	False	True
6	True	True	False	True	True	True	True
7	True	True	True	True	True	True	True
